

In the World of Temenos Banking Solutions: We Make the Complex Simple

Since 2013, S&G Technology Services and Temenos have been working together in close collaboration to add new and innovative capability to the Temenos solution portfolio, covering Transact, Infinity and Cloud deployment. This enduring, product-centric alliance makes us unique within the Transact and Infinity ecosystem and highlights the value we add and the strength of the Temenos relationship. A further dimension of intimacy is our recent appointment of Temenos' Chief Enterprise Architect as one of our non-exec directors. This successful and continuous relationship, and the skills and insight it has given us, enable us to advise and engage with major banking groups and financial institutions around the world, empowering them to respond to rapid changes in the banking technology landscape, take advantage of composable banking capability, and exceed customer expectations.

With headquarters in UK and a skills centre in Sofia, Bulgaria, we have easy reach across Europe combined with a global outlook to engage directly with partners and clients in the Americas, Middle East and elsewhere.

Strength and Scalability

S&G is part of Sirma Group - an award-winning software company and one of the largest technology companies in its region, boasting a diverse product and services portfolio with a strong focus on fintech, cognitive technologies, industrial software, IoT and medtech. Subsidiaries in North America and Middle East bring a broad international dimension. As part of this family, S&G Technology Services can call on a large pool of experts from sister companies such as Sirma Solutions (with more than 300 technical and business specialists) and Sirma Business Consulting (offering broad functional banking expertise).

Our Unique Collaborative Approach

We deliver value by augmenting customer or partner teams with our specialist consultants. For live clients, engagements may involve resolution of challenging technical problems, or extension of their core banking systems to confer unique competitive advantage. For new and implementing clients we take responsibility for specific work packages involving complex technology, where our **“close to Temenos Product”** relationship gives us unique insight and leverage. Additionally, we offer our highly experienced Client Architects (20+ years T24/Transact experience) in key technical governance or QA roles, typically working in concert with global partners or systems integrators.

Our People

- A banking practice of over 20 professionals with an average experience of 15 years in delivering Temenos engagements with prior extensive experience across retail and corporate banking, investment management and management consulting
- A team of over 300 software engineers, solution architects and QA specialists covering a range of programming languages, frameworks and technology stacks
- A balanced mix of technical, functional and development expertise across the team, highly specialised in assisting clients in challenging situations

Temenos Transact

- Deep expertise in product engineering and integration following Temenos Implementation Methodology Standards
- Specialist productised services such as “back to core” initiatives and assessment and readiness checks
- Subject matter experts in domains such as AA, LD, Temenos Payments Hub (TPH), DFE, Integration and Interaction Frameworks
- Highly skilled in project governance and in leading cross-functional teams of technical and functional consultants, developers, experience designers and business analysts

Temenos Infinity

- Enabling organisations achieve a true digital transformation by being part of the Infinity ecosystem since its very inception
- Skilled in helping clients achieve elegant integration to third party systems and leverage pre-built integrations from the Temenos Marketplace
- Our expert Infinity practitioners are known for building and deploying a full portfolio of frictionless, personalized, and secure banking applications
- Considerable experience in middleware and backend development by utilizing Quantum Visualizer, Fabric and Temenos Microservices and API Framework

Our Expertise

When you start your journey with S&G Technology services, you can anticipate a comprehensive service package. We have unrivalled knowledge and skill in ensuring that software implementations go further, work harder and deliver more.

Technical Perspective

Temenos Extensibility Framework
Knowledge of front-end languages and libraries (HTML, JavaScript, jQuery, React, Angular, Vue)
Comprehensive experience with data serialisation languages (XML, JSON, YAML)
Strong expertise in developing scalable back-end solutions with Java and Spring
Proficient in IF related messaging middleware (IIB, OSB, Mule, Tibco, Biztalk, Camel)
Leading architecture design (API-first, micro-services, event-driven streaming platforms (Kafka))

Functional Perspective

Transact functional customisation and L3 development
Experience with latest Transact releases
Senior team of jBASE developers with over 20 years of experience
Diverse team of functional consultants and business analysts with experience with various banking products
Large number of engagements, e.g. functional set up of AA Module as well as related modules
Understanding of payment and card management systems
Strong expertise in the preparation of test cases for quality assurance
Expertise and maintenance of product documentation, specifications and user manuals

Example Engagements

- Transformational upgrade from R13 TAFJ to R21 TAFJ for a credit union operating in North America
- A TPH integration for a leading European payment messaging broker
- Delivery of a fully integrated mobile banking app, enabling real-time interaction with Transact due to IRIS implementation
- Design and build of a cloud-based platform for aggregation of numerous data sources in a centralised workspace
- Design and build of a business intelligence, data-powered growth engine targeted to the SME client segment
